Subject: FW: ATSDR "Short Term" Health Advisory for MCHM

Communications from HHS folks regarding the draft discussion of the development basis for the 1 ppm advisory. All seems good. I have received no communication from the EPA folks, as yet. Hopefully, all will go to you, but I will forward if I see anything else. (Note that jon c. is on addressee list for this exchange, too.)--Vicky

Thanks for the comments about linking to HSDB. FYI, late yesterday NLM tweaked the search for 4-methylcyclohexanemethanol via NLM's TOXNET suite of databases (includes HSDB), and for users searching HSDB directly. Searching for 4-methylcyclohexanemethanol got users to the HSDB record, and now searching for "4-methylcyclohexane methanol" also works (it had been giving searchers the HSDB records for methylcyclohexane and methanol instead of the 4-methylcyclohexanemethanol record).

Sincerely,
Bert

The only suggestion for improvement, and not a show stopper would be to link the the NLM HSDB so the data used could be seen.

All,

On behalf of Vik Kapil of ATSDR, attached is an ATSDR-revised "plain language" "short-term" HA for the chemical spill in WV. This morning, WV is reporting all samples as non-detect at a reporting limit of 10ppb. If you could please have a look at the ATSDR final draft and identify any "show stopping" edits that might need to be made prior to release, I will pass those along to ATSDR.

The attached language is to be posted on the ATSDR website within 24 hours or less.

Sorry for the short notice and thanks again.

Chris
